

Ninja Trader Scalper EA Inputs:

<Trade Settings>

VolumeMode: All trades have a set lotsize with VOLUME_LOTS or a variable lotsize based on a defined risk with VOLUME_MONEY

Volume: Fixed lotsize (VOLUME_LOTS) or amount of money to risk (VOLUME_MONEY)

TpPercent (0 = No TP): The distance from entry to initial TP calculated as a percent of the entry price

SlPercent: The distance from entry to initial SL calculated as a percent of the entry price

TslTriggerPercent (0 = No TSL): The Trailing Stop is activated when a trade is TslTriggerPercent in profit (calculated as a percentage of the entry price)

TslPercent: The SL will be trailed in this set distance behind the current price (calculated as a percentage of the current price)

TslStepPercent: The SL will only be modified if it is at least this distance above the previous SL (calculated as a percentage of the current price)

<Signal Settings>

Trigger: EA will open a position when a Tick leaves the Channel (TRIGGER_TICK) or a bar closes outside of the channel (TRIGGER_M1 and TRIGGER_DC_BARS)

DcTimeframe: The timeframe for the Donchian Channel

DcPeriod: The period for the Donchian Channel indicator

<More Settings>

Magic: This number should be unique for every EA in your account since the EAs use it to identify their own trades

Commentary: Commentary for every position the EA opens

IsSendLogs: The EA will document some operations or show errors in the experts journal when true
