

# The Fisherman EA Inputs:

The Fisherman EA fishes for quick retracements within a larger trend. Filters define the overall trend direction; the EA then waits for a move against the trend before entering. Trade direction, moving-average and RSI filters, targets, stops and trailing are all configurable.

## Trading Volume Modes:

**VOLUME\_FIXED** > Uses a fixed lot size for every trade.

**VOLUME\_MANAGED** > Uses "Fixed Lots" per each "Fixed Lots Per x Money" amount of money.

**VOLUME\_PERCENT** > Lot size is calculated so the set percentage of the Base Money is lost if the initial SL is hit.

## <Volume Settings>

**Trading Volume:** Mode used to calculate the lot size for each trade (see Trading Volume Modes above).

**Fixed Lots:** Lot size for VOLUME\_FIXED and VOLUME\_MANAGED.

**Fixed Lots Per x Money:** Base money amount for VOLUME\_MANAGED.

**Risk Percentage of Base Money:** Risk percent (relative to Base Money) for VOLUME\_PERCENT.

**Base Money:** Reference money amount used for the percentage volume calculation.

## <Order Settings>

**Timeframe:** Signal timeframe the EA works on.

**Retracement Percent:** How far price must move against the trend before an entry is taken.

**TP Percent (0 = No TP):** Take-profit distance as a percentage of the open price. 0 disables the TP.

**SL Percent (0 = No SL):** Stop-loss distance as a percentage of the open price. 0 disables the SL.

## <Time Settings>

**Close Positions:** Decides whether open positions are closed at the close time.

**Close Positions Hour:** Hour at which open positions are closed.

**Close Positions Minute:** Minute at which open positions are closed.

## <Trailing Stop Settings>

**BE Stop Trigger Percent (0 = Inactive):** Profit (% of price) at which the break-even stop activates. 0 disables it.

**BE Stop Puffer Percent:** How far into profit the stop loss is moved once break-even activates.

**TSL Trigger Percent (0 = Inactive):** Profit (% of price) at which the trailing stop activates. 0 disables it.

**TSL Percent:** Distance the trailing stop is kept behind the current market price (% of price).

**TSL Step Percent:** The stop loss is only modified if it moves at least this distance (% of price).

## <Filter Settings>

**Buy Trades:** Allow long (buy) trades.

**Sell Trades:** Allow short (sell) trades.

**MA Filter:** Only trade in the direction defined by a moving average.

**MA Timeframe:** Timeframe of the moving-average filter.

**MA Periods:** Number of bars for the moving-average filter.

**MA Method:** Calculation method of the moving average (e.g. SMA, EMA).

**MA Applied Price:** Price the moving average is calculated on (e.g. close).

**RSI Filter:** Add an RSI condition to the entry filter.

**RSI Timeframe:** Timeframe of the RSI filter.

**RSI Periods:** Number of bars for the RSI calculation.

**RSI Applied Price:** Price the RSI is calculated on (e.g. close).

**RSI Level:** RSI threshold used by the filter.

### <More Settings>

**Object Color:** Color of the objects the EA draws on the chart.

**Order Comment:** Comment attached to every order the EA places.

**Magic Number:** Unique number identifying this EA's trades. Use a different one for every EA on the same account.

**Chart Comment:** Activates or deactivates the info comment in the upper-left corner of the chart.

*Note: The default inputs are not a recommendation and are not necessarily the best settings. Different symbols require different inputs. Always test in the Strategy Tester and on a demo account first. All the best and good trades :)*
